A Welcome Porch in the Forest

Rooted in Asheboro, North Carolina, a serene healthcare facility nestled in nature blends architecture with the surrounding forest. This first phase of a Health & Wellness Campus Master Plan, completed on a modest budget and in 24 months from start of design to the first patient, focuses on an immersive patient experience. It features porches with protected floor-to-ceiling glass, connecting occupants with nature, engaging the community, and flooding the interior with controlled natural light.

Light Color Roof
 With high SRI Value to maximize energy efficiency

Biophilic Design
 Promoting health through connection to nature and with elements that reminds us of the natural environment

Night Sky
 Full cut-off site light fixtures are specified to eliminate light pollution

On Site Power
 Back-up generator included

Water Conservation
 Native plants requiring minimal irrigation selected

Water Management
 Swales in the parking lot median collect, direct and slow down storm water

Open Space
 More than 70% of the site undisturbed

Views to Nature
 The design prioritized gardens and views of the surrounding forest

High Performance Skin
 Thermally broken skin system with high R Values utilized

Outdoor Seating
 Design provides outdoor seating areas for visitors, patients and staff

Noise Reduction
 Acoustician reviewed project to ensure proper noise and vibration levels meet FGI guidelines

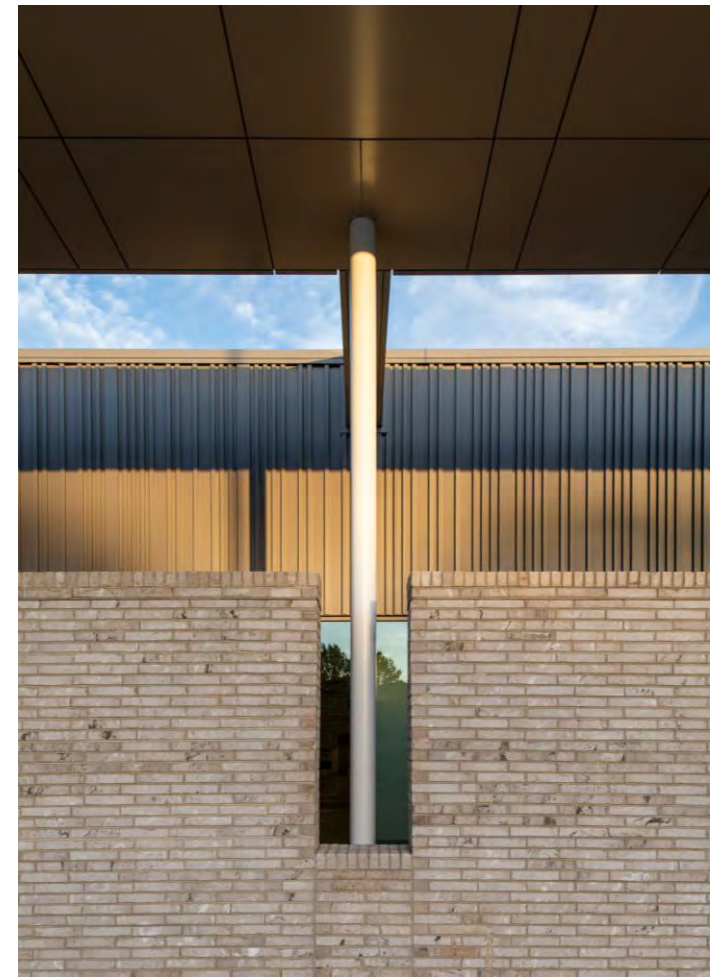

Community Art
 Design incorporates interior and exterior locations for art

Design for the Disable
 Accessibility has been designed through the facility

Flexibility
 Building designed for future flexibility/expansion

Sustainable Materials
 Selected materials with low VOC's, recycled content and easily recyclable
